

## Amada America

Two water features, each approximately 33 ft. long and 12 ft. wide are positioned perpendicular to each other flanking the main entrance of a business complex in Brea, CA. The structured layout of multiple reflecting pools enable water to glide down textured basalt from the top basin, landing on a granite pool that rises one foot above the dry river rock bed. This multi-tiered water feature creates a memorable visual for this corporate outdoor space.

### Type

Two water features at an entry courtyard
