

Brookfield Mall

Designed to blend perfectly within the Brookfield Mall, the water wall produces interesting surface quality by varying the speed of the water flow. Approximately 8 ft. wide by 22 ft. tall, the water wall is composed of beautifully ridged copper with bronze patina panels of various sizes and textures. The wall is illuminated with a series of underwater lights that give the feature more depth and artistry.

Type

Recessed water wall in a shopping center

Materials

ridged copper with bronze patina, granite basin cover

Location

Brookfield, WI
