

## Embassy Suites Chattanooga

The centerpiece in the main lobby of the Embassy Suites of Chattanooga, TN, consists of two interlocking curved water features that showcase multiple textures of water within a sculptural form. The taller water veil with a bronze frame allows water to trickle down the translucent stainless steel screen from a height of 14 ft. On the lower feature, water continuously overflows from the rounded copper wall into a bed of polished black river rocks. The asymmetry of the sculptural forms, along with the moving water engages the hotel guests from various vantage points within the lobby, and reinforces the hotel's opulent atmosphere.
