

Embassy Suites Chattanooga

The centerpiece feature in the main lobby consists of two interlocking curves that showcases multiple textures of water within a sculptural form. The curved water veil with bronze frame allows water to trickle down the translucent stainless steel screen from a height of 14 ft. On the shorter feature, water continuously overflows from the curved copper wall into a bed of polished black river rocks. The asymmetry of the sculptural forms with moving water engages the hotel guests from various locations within the lobby.
