

Huntington Pavilion

The first of two water features were installed at the new Huntington Outpatient Pavilion Breast Center in Pasadena, CA. A curved Water Veil with a translucent stainless steel wire screen displays mesmerizing water textures continuously falling into a semi-round basin. The water feature stands on top of a raised planter with its circular design creating an inviting curved bench alongside the fountain for visitors. On the concave side, an overflowing black granite pool reflects the surrounding light and creates a gentle sound of water falling on black river rocks.

TYPE
Framed Water Veil

MATERIALS
Stainless steel, brass

LOCATION
Pasadena, CA
