

La Jolla Residence (courtyard)

The elegantly designed and timeless water feature makes a bold statement in this contemporary home in La Jolla, CA. The water feature is embedded as part of the structural support for a staircase that doubles as a wall that frames the courtyard. Five identical stainless steel spouts allow water to gently flow into the lights below, creating a contained low splash water effect, while producing calming water sounds for the courtyard and adjacent rooms. The water feature's base is a classic stone basin filled with complimentary white river rocks.

Type

Five scuppers with covered basin

Materials

stainless steel, concrete, white river rocks

Location

La Jolla, CA
