

Presbyterian Medical Office Building

This stunning water feature is approximately 15 ft. wide by 5 ft. tall with stepped, multiple tiers, each providing a unique and different water effect. Made from absolute black granite, and copper with bronze patina, the materials chosen produce colors of gold and bronze, with a strategic lighting system that further illuminates the richness of the elements used. Commissioned by the hospital, this fountain serves two purposes, not only is it an impressive water feature that greets visitors, but it also fulfills a public art requirement for the city of Whittier.

Type

Public art water feature with multiple water effects
