

## Water Museum

Commissioned by the Water Museum in Shimane, Japan. Approximately 16 ft. in diameter, the ring is crafted of polished black granite faces and curved copper channels along which the water flows. Water adheres to the outer and inner surfaces of the ring, which appears to float on top of the water surrounding it.

### Type

Water sculpture in a museum water garden

### Materials

polished black granite, ridged copper with bronze patina

### Location

Shimane, Japan
