

Wetherly Copper Water Wall

This custom water feature sits in a stylish patio in a private residence in Los Angeles, California. The water wall stands over 7 ft wide, by 4 ft high, and is made of copper, with bronze patina. The water feature is comprised of two ridged panels that enable the water to flow over and down to a bed of black river rocks within a dark reflective pool. Four submerged lights follow the angular design of the feature, as they highlight the unique water effects created by the cascading water.

Type
Paneled Water Wall

Materials
copper with patina, black river rocks

Location
Los Angeles, CA
