

Williamsburg Sentara

The water feature contains three sculptural elements of varying heights and materials, most prominent of which is a 23 ft. tall translucent, stainless steel water veil that rises from a circular granite reflecting pool. Curvilinear shapes balance the straight lines of the Water Veil as a 5 ft. tall polished stainless steel water wall curves off-center from the soaring veil. A complimentary 12 ft. tall curved copper column extends in the opposing direction of the stainless steel wall.
