

Airport Atrium

The free standing water feature is situated in a Class A commercial building in California. The striking water veil stands 50 ft. tall and is the focal point of the recently renovated lobby. Though large in scale, it is light and translucent due to the stainless steel mesh material chosen, achieving a visual unity with the multi-paneled glass architectural building entrance that showcases the dynamic water feature.

Type
Water Veil

Materials
stainless steel

Location
Torrance, CA
