

Drury Lane Glass Water Wall

The relaxing clear glass water wall, approximately 16 ft. wide by 9 ft. tall, is seamlessly architecturally integrated into this private residence located in Beverly Hills, CA. The water feature covers the entire exterior wall of a cabana, adjacent to the pool and outdoor seating area. The glass support channels, water trough, and catch basin are completely concealed from view. A remote pump system recirculates and cleans the water in the feature, making it easy and cost efficient.
