

Methodist Women's Hospital

Two free-standing, curved Water Veils, 12 ft. and 26 ft. tall, are clad in polished and brushed stainless steel. A 5 ft. tall natural basalt stone column intersects with the tallest Water Veil. Underwater lights accentuate the cascading water textures on the Water Veils and the basalt column. Black granite pavers and a terrazzo surround conceal the stainless steel basin. The unique arrangement of the water feature's three elements creates a diverse form which appears to change with vantages throughout the lobby.

Type

Three element water veil
