

Wilshire Vermont

Melding glass and stone, with contemporary and classic elements, this large scale water feature was installed in the lobby of a multi-use building in a busy Los Angeles urban center. The custom glass water wall stands at a striking 11 ft. tall and 6 ft. wide; as the ridged surface enables water to cascade down between two stone monument inspired blocks and into a wide basin lined with ivory stone pavers.

Type

Ridged glass water wall in a lobby

Materials

glass, stone
