

## Children's Hospital

A spiral water feature, 22 ft. tall, complements the surrounding space. The design and fabrication process involved extensive engineering and testing that included 3D modeling and complex metal forming. Some details include curved horizontal "ribbons" that reinforce and complement the spiral shape and pure white LED strip lighting to illuminate the twisting Water Veil.

TYPE  
Framed Water Veil

MATERIALS  
Stainless steel

LOCATION  
Omaha, NE
