

Dana Point Residence

Installed in a newly built contemporary private residence in Dana Point, California, this water feature produces a stunning visual focus for the entryway. Created as a geometric continuation of an existing curved wall at the entrance, it stands 7.5 ft. high and 10 ft wide, and also mimics the architectural curvilinear shape of the ceiling directly above. The water feature is made of a stainless steel veil leading into a hidden recessed basin that holds polished black river rocks, and covertly placed lighting that enhances the engaging shapes and patterns of the sheets of water that elegantly flow down.

TYPE
Framed Water Veil

MATERIALS
Stainless steel, beach pebbles

LOCATION
Dana Point, CA
