

Methodist Women's Hospital

Two dramatic free-standing curved Water Veils, 12 ft. and 26 ft. tall, are clad in polished and brushed stainless steel. A 5 ft. tall natural basalt stone column intersects with the tallest Water Veil, while underwater lights accentuate the cascading water textures on the Water Veils and the basalt column. Black granite pavers and a terrazzo surround and conceal the stainless steel basin. The unique arrangement of the water feature's three elements create a diverse form which appears to change from different vantage points throughout the lobby.

TYPE
Framed Water Veil

MATERIALS
Stainless steel, granite

LOCATION
Omaha, NE
