

## The St. Regis Princeville

Water Studio designed and fabricated seven frameless Water Veils, each approximately 6 ft. wide by 10 ft. tall, for the new spa lounge at The St. Regis Princeville Resort on the island of Kauai, Hawaii. The water features consist of concealed stainless steel structural frames that allow water to flow down the translucent screens without any visible support. The cascading water on the screens fall continuously and is effortlessly able to be seen from both sides. Underwater lights are used to illuminate and accentuate the distinctive water textures gliding down.
