

Creighton Medical Center

Located within the main lobby of the Creighton University Medical Center hospital, this water sculpture includes two curved and tapered Water Veils commemorating the work and achievements of a retiring university president. The arc length of the veils are 4 ft. and 5 ft. respectively. The 4 ft. veil reaches a height of 9 ft., while the 5 ft. veil reaches 7 ft. in height. The veils are situated in mirrored symmetry, allowing one veil to accentuate and complement the other in harmonious synchronicity. Both structures are clad in brass with bronze colored patina. White LED underwater lights accentuate the water textures on the surfaces.

Type

Two curved water veils

Materials

copper, stainless steel

Location

Omaha, NE
