

Waldorf Astoria Beverly Hills

The motor court water feature at the new Waldorf Astoria consists of three tiers of sculptural bronze pools that overflow with water. The lower tier features more than 120 custom-fabricated rivulets to create pleasing sound of water that helps to conceal the road noise from a busy street. The frothy nozzle at the top of the water feature provides additional water effect and movement. Underwater lights illuminate the nozzle, rivulets, and bronze surfaces to provide a dramatic welcoming statement.
