

Pasadena Office Tower

Designed with Kanner Architects, this unique water feature is a stainless steel Water Veil standing approximately ten feet in height and rising above the finished ceiling. The veil is a calming focal point for the visitors and guests waiting in the lobby of a large office tower in Pasadena, California. The minimal and clean style of the frameless Water Veil complements the modern design of the lobby. Water gently cascades down the translucent stainless steel screen and into a brushed stainless steel basin containing underwater lights and black river rocks.

Type

Frame-less water veil

Materials

stainless silver, river rocks

Location

Pasadena, CA
