

USC ICT Curved Glass Water Wall

Designed and constructed for the USC's Institute for Creative Technology offices in Playa Vista, CA, this water wall is visible from both sides, and creates a translucent soothing divider. Made of glass, and stainless steel, the curved water wall allows sheets of water to continually cascade down into a bed of black river rocks. The water feature breaks up an otherwise monotonous wall, allowing light, intriguing water patterns and the sound of flowing water into the hallways of the work space.

Type

Curved Glass Water Wall

Materials

glass, stainless steel, black river rocks

Location

Playa Vista, CA
