

Corona Del Mar Water Wall

Fabricated from CNC-machined copper and stainless steel, a 22 ft. tall copper water wall with rich brown patina wraps around the curved wall behind the main staircase of a home in Corona Del Mar, California. Water continually cascades down the textured copper surfaces without splashing and disappears into the recessed basin in the floor. The textures of the falling water are illuminated by lights below, adding a warm ambiance to the luxury home.

TYPE
Exterior Water Wall

MATERIALS
Copper, beach pebbles

LOCATION
Corona Del Mar, CA
