

Altair Irvine Water Features

Located in the home development of Altair Irvine, in Irvine, CA., Water Studio was commissioned to design two complimentary stainless steel water features to create an inviting outdoor space. The two companion water features, yet different in shape, share a continuity of design which is achieved by the materials and texture of both fountains. The rectangular trough polished stainless steel water feature, with bubbling nozzles, creates tranquil water sounds as it greets visitors. The split curved water wall at the farther end of the courtyard is also made of stainless steel, and mirrors the style of its companion water feature with its mesmerizing silver reflective pool.

Type

Companion Water Features -
Rectangular Trough and
Circular Water Wall
