

K1 Investment Water Veil with Rivulets

One of four features located at K1 Investment's newly renovated office building, consists of a copper podium rivulet placed directly in front of a 24. ft. wide Water Veil. Streams of water fall from the custom rivulets on the copper podium, creating peaceful sounds of trickling water. The water flow of the copper podium complements the contrasting water patterns created from stainless steel Water Veil. The variations of water textures and materials create a compelling composition for the space.
