

Stadium Towers

A triangular granite pool rises 12 inches from a bed of beach pebbles to reflect the surrounding landscape and the sky. An underground vault with custom designed pump and water filtration system was utilized to provide crystal clear water that continually overflows over the perfect granite weir.

It is the focal point of the contemporary landscape that surrounds the Stadium Towers building in Anaheim, California. This Class A office complex is located near City of Anaheim's sports stadiums, theme parks, and other popular venues. Water Studio worked with Gensler and Floor Plans Construction to successfully complete the project.
