

## Curved Copper Water Wall

This custom water wall is 3 ½ ft. tall and 14 ft. wide and features a curved design made of smooth copper with a dark bronze patina. It has been incorporated into a circular bench and planter amenity for an upscale corporate interior in Westlake Village, California. Water Studio brought to life this feature that was designed by Studio Blitz and photographed by Kim Rodgers. Water flows from the upper reflecting pool down the wall, off a drip edge, and into a pool covered with river rocks, creating a dynamic focal point in the office lounge area.
