

Stainless Steel Infinity Edge Fountain

A sophisticated, circular infinity edge water feature crafted from stainless steel creates a welcoming ambiance as family and visitors arrive at this private residence in Los Angeles, CA. The podium boasts a diameter of 6 ft. and stands at a height of 1 ft. 4 in. A specially fabricated custom spout is nearly 3 ft. tall and gracefully pours water into the podium. The shallow upper pool is finished with polished black granite. Water elegantly cascades over the podium weir, continuously flowing into a recessed catch basin covered with stainless steel flashing. A second companion feature is identical excluding the spout and is located in a backyard courtyard adjacent to the pool.
