

Eisenhower Fountain

Water Studio executed two custom water features as part of The City of Denison, Texas' Main Street revitalization initiative. The concept design was conceived by Landscape Architect Chris Lambka, drawing inspiration from the historical significance of President Dwight D. Eisenhower's birthplace and Water Studio's previous projects. The centerpiece of this design is a striking 19 ft. 6 in. curved copper podium with a dark bronze patina finish. It is elegantly positioned within a recessed 21 ft. curved stainless steel basin. Water gracefully cascades from a total of thirty-four copper spouts, descending 2 ft. 7 in. into a splash pool encircled by Mexican Beach Pebbles.
