

Los Angeles Cascade Ledge

The outer wall of a natatorium is activated with two, 5 ft. long cascades of water that gently flow into stainless steel basins, elegantly clad with travertine stone. Water gracefully spills from custom scupper ledges, also finished in travertine, mounted along the wall. The cascade drops 2 ft. 6 in., producing soothing sounds of falling water that mask a busy nearby street. The effect transforms the space into a peaceful oasis for this private Los Angeles, CA estate.
