

## Rancho Santa Fe Water Sculpture

A 10 ft. tall polished stainless steel water sculpture anchors the entry courtyard of a private residence in Rancho Santa Fe, CA. Part of our *Machine* series, the sculpture features curved and flat surfaces to represent industrial manufactured objects. Water flows seamlessly from the top pool, cascading down the vertical surfaces in mesmerizing waves into a shallow basin covered in river rocks. The mirror-polished finish reflects the surrounding landscape and sky, creating an ever-changing arrival experience for residents and guests alike.
