

Granite Rivulet Water Feature

An elegant granite rivulet water feature anchors the backyard patio of a contemporary Los Angeles home, serving as a dynamic and visually captivating focal point. Standing 2 feet 6 inches tall, the granite podium features water cascading down its front face in delicate rivulets that transform into shimmering droplets. Water spills evenly from the upper reflection pool, disappearing into a bed of smooth black beach pebbles below. At night, underwater LED lighting highlights the movement and texture of the water, casting a soft glow that accentuates the feature's sculptural presence. The gentle sound of flowing water adds a calming ambiance to the entire space.
