

Bronze Sculptural Water Wall

Our stunning silicon bronze sculptural water wall transforms a subterranean garage into a tranquil entrance for an estate in Pacific Palisades, CA. This installation measures 12 ft. wide by 9 ft. 6 in. tall. It features contrasting smooth and ridged panels that create diverse paths for cascading water. The light bronze patina finish enhances the visibility of the mesmerizing water patterns. A stainless steel basin, clad with dark stone contains underwater lighting that beautifully highlight the falling water from below. This exquisite water feature infuses a touch of nature into the underground space.
